

D1 vs D2

D2 lymphadenectomy is associated with **lower locoregional recurrence** and **gastric-cancer-related death** rates than D1 surgery.

D2 lymphadenectomy is the **recommended** surgical approach for patients with resectable (curable) gastric cancer.

D2 vs D2+PALN

As compared with D2 lymphadenectomy alone, treatment with

D2 lymphadenectomy plus PAND does not improve the survival rate in curable gastric cancer.
